No one agency is the same as another. With each organization having sets of legacy and existent systems in place, flexibility and adaptability are necessary features when considering a case management system. Column Case Management easily integrates into common third party applications out-of-the-box and has customized integrations to address mainframe and in-house built applications.

**Key Benefits**

- **NYPD:** LDAP for Single Sign-On and automated case permissions
- **NOPD:** District Attorney Zip and Ship File Transfers
- **State of FL:** Legal and Accounts Receivable systems
- **City of Chicago:** Web Service to format address strings and return extended location information, as well as City Employee Database feed
- **State of OH:** Network Directory Integration – Allows storage of large files (audio/video), central console for searching and advanced permissions
- **SAPD:** Gang Curfew, Crime Analysis Entry System, Parole, Officer Safely Link, Probation County Adult, Warrant, Crashand Sex Offender Databases

**Standard integrations include:**

- **LDAP Authentication**
  Enables the Column Case Management user authentication to Active Directory, Novell eDirectory or other LDAP data sources, with all LDAP authentication able to be done with or without SSL.

- **Single Sign On (SSO)**
  Single Sign On allows for the retention of a successful authentication for a user who has already authenticated themselves against the domain or another application, allowing for quick, yet secure, sign on.

- **Email Configuration and Integration**
  Allows the Column Case Management system to both receive and send emails from external systems and users, as well as allows the creation of tickets and approve or reject requests.

- **Web-Service Integrations**
  Column Case Management can be configured to allow third-party applications to query or send information securely both from and into the software solution.

- **People Data Synchronization**
  Column Case Management can manage, load, and maintain people data by an external data source, allowing the creation of new people records, synchronization of fields across all records, data validation, and configurable data translation for the solution's fields.
