Providing best of breed technology solutions that automate DevOps principles and capabilities

The Challenge

Modern business has put software in the driver’s seat – competitive differentiators, new markets and brand awareness. High quality and agile software releases are the keys to successful software delivery. Increasingly complex environments: legacy applications, web applications, mobile, big data, etc. are making organizations change the way they approach software delivery and support. Past processes and antiquated tools are not architected to support today’s modern applications.

The Solution

Column Technologies provides DevOps enabling solutions built from the ground up to support today’s modern applications. These solutions are "best in class" and leaders in their respective tech sector. See our Technology Partners on page 2.

The Facts

- 73% of companies state the application performance is key to brand image
- 89% of consumers make their next purchase from a competitor following a poor experience

Automate the Key Areas of DevOps
